

Burmester Network products

BACKUP - DATA SECURITY COMES FIRST

- A RAID system does not provide 100 percent protection against data loss
- Protect your music database by regularly backing up to a hard drive

- If available, use the USB3 port for fast data transfer
Note: USB3 hard drives without their own power supply may not be recognized or work correctly when connected to a USB2.0 port.

- Call up the settings area of the Web-UI and start the backup
Note: Depending on the size of the data, the backup may take some time

SOFTWARE-UPDATE - ALWAYS UP TO DATE

- Get new exciting features with every update

- When a new software version is released, you will receive a notification on your device and in the app on your smartphone or tablet

- Install the update from the Internet, via USB or from your computer

SERVICE - ANY QUESTIONS? WE ARE HAPPY TO HELP!

- Request support via the help section of the Web-UI

- Get help via remote maintenance
This requires your prior confirmation on the device. The security of your data and network is ensured at all times.

- Contact us by mail at service@burmester.de
